J. M. THORBURN & CO.'S

ANNUAL DESCRIPTIVE CATALOGUE

— OF —

FLOWER SEEDS

WITH PRACTICAL DIRECTIONS FOR THEIR

CULTURE AND TREATMENT.

ALSO, A LIST OF

115 VARIETIES OF

BEAUTIFUL FRENCH HYBRID GLADIOLUS,

AND OTHER

SPRING BULBOUS ROOTS.

FLOWER SEEDS, from their compactness and light weight, can be safely transported by mail to any part of the United States, with punctuality and expedition.

Orders by mail promptly attended to and Catalogues forwarded, free of charge, to applicants.

JAMES M. THORBURN & CO.,
15 JOHN STREET NEW-YORK.

Entered according to Act of Congress, in the year 1864, by

JAMES M. THORBURN & CO.,

THE FOLLOWING CATALOGUES ARE PUBLISHED DURING THE YEAR:

Catalogue of VEGETABLE, AGRICULTURAL, &c., SEEDS ready in JANUARY.

Catalogue of FLOWER SEEDS, containing Directions for their Cultivation, with over One Thousand Varieties, ready in FEBRUARY.

Catalogue of TREE and SHRUB SEEDS, with Directions for their Cultivation, containing over Three Hundred Varieties, ready in FEBRUARY.

Catalogue of FRENCH HYBRID GLADIOLUS and other Spring Bulbs, ready in FEBRUARY.

Catalogue of DUTCH BULBOUS ROOTS, with Directions for their Management, ready in SEPTEMBER.

TRADE LISTS of the above, for Seed Merchants, Published in January and July.

PRACTICAL DIRECTIONS FOR THE CULTURE AND TREATMENT OF FLOWER SEEDS.

HARDY ANNUALS (HA).—These seeds should be sown in May and June. The second sowing, to succeed the first, should be a month or six weeks after it. They may also be sown in pots the beginning of April, if they can have the protection of a cucumber-frame or green-house. The soil for pots, in which to sow them, should be light and rich; and when sown in the garden, the earth should be made fine,—and if light compost, such as a mixture of garden-soil and old manure in equal parts, it will advance the growth and strength of the plants if a spadeful is placed where each patch of seed is to be sown. The most effective way is, to sow the seeds in patches where they are intended to bloom. All small seeds should *only be covered with soil an eighth of an inch thick*;—but large seeds—such as Sweet Peas—should be placed at a depth of an inch or so.

Care must be taken to give support to such *Annuals* as require it, whether climbers or not, as soon as they are three or four inches high,—otherwise, they will trail on the ground and not grow strong. The earth round each patch of Flowers must be kept loose and open by the hoe, and free from weeds. In dry weather, some may require water; but none need be given at the time of sowing, unless the soil is very dry.

Where there is the convenience of garden-frames with glass lights, *Hardy Annuals*, and also *Biennials*, may be sown in September in small patches six inches apart in the soil,—to be removed by taking each patch up in the following May (being careful to remove them with a good ball of earth, and immediately giving water), when they can be placed in the borders. In this case, the frames should not be covered, after sowing, with glass until the Fall rains or frost render it necessary,—and in all mild weather, during Winter, air should be given, by elevating the light in the middle of the day whenever the temperature is above the freezing-point.

HARDY BIENNIALS AND PERENNIALS.—These require the same treatment as the *Hardy Annuals*. In addition to the above, both *Hardy Biennials* and *Perennials* may be sown in the open border in September. In this case, it is a good plan at the commencement of frost to cover them slightly with straw or any dry litter, in order to afford some protection from the extreme severity of the Winters. As soon as the weather breaks in the Spring, the covering must be carefully removed and the surface around them loosened.

HALF HARDY ANNUALS (hhA).—These are best sown in pots or in a frame in the open soil, as directed for *Hardy Annuals* when sown in September. They may be sown thus at any time after the middle of April, as the frame will be a sufficient protection,—but it is best to cover the glass with a mat or straw at night, until danger of night-frost is past. In the day give all the air possible, by partially or wholly removing the lights. After the end of May, these may be sown in the open border like *Hardy Annuals*.

Half Hardy Biennials and Perennials require the same treatment.

TENDER ANNUALS, BIENNIALS AND PERENNIALS.—The best method to obtain an early bloom of the *Tender Annuals* (tA), and to insure strength to the plants, is to sow the seeds in pots early in March, placing them in a warm green-house or window, or plunging them into a moderate hot-bed, carefully protecting them from the cold, shading them from the midday sun, and watering them with a finely pierced watering-can. The seed should be sown in very light, sandy compost, and the pots well drained by placing broken earthenware and rough sods in the bottom. The finer seeds must not be planted more than an eighth of an inch deep, and the soil must be pressed down closely over them. Water frequently—particularly, if the house or frame is very warm. As soon as the seed-leaf is fully developed, transplant into small pots, three or four in each,—and when they have acquired sufficient strength transplant into the flower-beds—not, however, before the middle of May.

GREEN-HOUSE SEEDS (g).—Should be sown as directed for *Tender Annuals*, in pots, pits or boxes—be kept in the house, carefully watched, slightly watered occasionally, and sheltered from the hot sun till strong enough to transplant. Most of these varieties may be sown at any season of the year.

The smaller seeds of the *Green-House Plants* are sometimes difficult to germinate, unless great care is taken in the mode of sowing. Thence the supposition is produced that the seed itself is not good,—whereas the fault is not in the seed, but in the treatment. Fine seeds of this description should be sown in leaf-mould or peat-earth, with some silver sand added to it, which should be pressed firmly down in the seed-pan or pot, and made perfectly level at the top, so that the mould may not afterward sink materially with watering, and thereby carry down the seed with it to a greater depth than that at which it is sown. Sow the seed very thin, and cover *very slightly* with a little of the compost, or with some of the silver sand. By this method, the difficulty of succeeding with fine seeds will be removed. As soon as the young plants have two leaves, they should be transplanted into similar compost in another pot. To do this, do not *pull* them out of the seed-pan, but *lift* them with the point of a knife under their roots. By that means, the young, minute roots are taken up without breaking. After transplanting, they should be kept in a shady part of the green-house for a few days, until they are established in the new soil.

There are many minute plants, from the finer seeds, killed by drenching them with water whilst very young. One way to avoid this is, to give the water by dipping a clothes-brush in water, shaking off the greatest part of the water from the brush, and then (holding the brush over the seed-pan) drawing the hand over the bristles several times, which will cause the water to be thrown on the younger plants almost like dew. Whilst in the first stage of their existence, plants require moisture in a minute quantity, often repeated, and not in such large quantities as to saturate the soil in which they are growing.

To avoid failure, Flower Seeds should not be sown in the open borders too early; never, in this vicinity before May. More disappointment results from too early sowing than from any other cause.

EXPLANATIONS OF THE CATALOGUE.

THE figures in the *first column* give the comparative time of *Flowering*. As it is impossible, in our varied extent of climate, to state the exact month any plant may flower in, we have adopted the simple plan of classing the different varieties into EARLY, INTERMEDIATE and LATE flowering sorts. Thus:

- No. 1 designates *early*.
 No. 2 " *intermediate*.
 No. 3 " *late flowering plants*.

The *second column* gives the *Botanical* or *Scientific* name, in Roman characters; and for ready reference, also the *common* name, in *Italics*.

- * designates *Climbing Plants*.
 in all cases, *repetition*.
 in vars... in *varieties*, or mixed colors.
 fl. pl. ... *flore pleno*, or double-flowering.

The *third column* gives the *Hardiness* and *Duration*:

- A representing *Annual*, lasting but one year.
 B ... *Biennial*, ... two years.
 P ... *Perennial*, ... three or more years.

But as a large number of the Biennials and Perennials, if sown early, flower the first season, this distinguishing mark † is affixed to such.

- h. represents *hardy*—plants for open borders.
 hh. ... *half hardy*—plants that require to be forwarded in
 t. ... *tender*—requiring protection. [pots or frames.
 g. ... *green-house plants*.
 bu. ... *bulbous plants*.
 s. ... *shrubs*.

The *fourth column* gives the color abbreviated. Thus:

ap...apetalous,	cr...crimson,	li...lilac,	spot...spotted,
az...azure,	d...dark,	o...orange,	stra...straw,
b...blue,	div...diverse,	ptd...painted,	strip...striped,
blk...black,	flsh...flesh,	p...purple,	sul...sulphur,
blh...blush,	gn...green,	pk...pink,	v...violet,
br...brown,	gy...grey,	r...red,	va...variegated,
bf...buff,	l...light,	ro...rose,	w...white,
car...carmine,	lem...lemon,	s...scarlet,	y...yellow.
	ver...vermillion.		

The *fifth column* gives the comparative height of the plants in feet—*trai*. signifies *trailing*.

The *sixth column*, the price ¢ packet.

☞ The NOVELTIES of the Season, together with some other approved Varieties, will be found printed in **heavy-faced type**.

THORBURN'S CATALOGUE OF FLOWER SEEDS.

FLOWER SEEDS mailed promptly, with the Postage paid, on receipt of the amount annexed.

Time of Flowering.	A dash (—) indicates a variety. Example: <i>Agrostemma — alba</i> , meaning a variety of the <i>Agrostemma coronaria</i> .	Hardiness and Duration.	Color of the Flower.	Height in Feet.	Price per pkt.	GENERAL OBSERVATIONS.
2	Abobra viridiflora*	hA	gr.	8	10	An acquisition, fine scarlet fruit.
1 3	Abutilon floribundum	gS	stri.	6	25	} These are extremely beautiful veined and striped flowers.
1 3	hybridum	25	
2	Abronia umbellata	hhA	ro.	traï.	10	Beautiful Verbena-like Annual.
1	Acacia argyrophilla	gS	y.	6	25	} A handsome tribe of greenhouse shrubs, with fine foliage; soak the seed in hot water six hours; then sow in hot-beds, in sandy peat: use good loam. When well grown and planted out in lawns, they flower finely.
1	dealbata	4	10	
1	grandis	6	25	
1	latifolia	5	10	
1	lophantha	6	10	
1	Newmanni	10	
1	speciosa	...	p. y.	...	10	
1	xiphyloides	50	
2	<i>Achillea Ptarmica</i>	hP	w.	1	5	Free flowering Perennials.
2	<i>Aconitum napellus</i>	...	b.	3	5	} <i>Monkshood</i> ; free flowering, hardy, succeeds well under shade of trees.
2	— albus	...	w.	...	5	
3	— Mixed	hB	div.	...	5	
2	Acroclitium roseum	hhA	y. & ro.	1½	10	Everlasting Flower, very pretty.
2	<i>Adonis æstivalis</i>	hA	s.	1	5	} Pretty, free flowering.
2	autumnalis	...	cr.	...	5	
	<i>African Hibiscus</i>	see				Hibiscus Africanus.
	<i>African Marigold</i>	see				Tagetes erecta.
2	<i>Ageratum cœlestinum nanum</i>	hA	b.	¾	5	} Beautiful bedding-plants, of bluish lilac and white colors, flowering all Summer.
2	conspicuum	...	w.	1½	5	
2	Mexicanum	5	
2	<i>Agrostemma coronaria</i>	†hP	ro.	1	5	} Fine hardy plants, for masses; ornamental.
2	— alba	...	w.	...	5	
1	<i>Aloe ferox</i>	gS	y.	6	25	Sow in sandy loam.
1 3	<i>Alonsoa grandiflora</i>	†hhB	s.	2	10	} Very showy plants, fine for mixed beds; free flowering.
1 3	incisifolia	10	
1 3	Warszewiczii	1½	10	
1 2	<i>Alstroemeria aurantiaca</i>	gP	or.	2	10	} A beautiful tribe of tuberous-rooted plants.
1 2	pulchella	...	pur.	...	10	
1 2	in vars.	...	div.	...	10	
3	<i>Althea cannabina</i>	†hP	pur.	6	10	

Time of Flowering.	A dash (—) indicates a variety. Example: Agrostemma — alba, meaning a variety of the Agrostemma coronaria.	Hardness and Duration.	Color of the Flower.	Height in Feet.	Price per pkt.	GENERAL OBSERVATIONS.		
3	<i>Althea rosea fl. pl.</i> (7/8 oz. \$1.50)	†hP	div.	4	10	Choicest prize varieties mixed.		
1 3	<i>Alyssum maritimum</i> (7/8 oz. 75c.)	hA	w.	3	5	The well-known Sweet Alyssum.		
1 2	saxatile	†hP	y.	1	5	} Beautiful Spring-blooming plants; fine for borders.		
1 3	Wiersbecki	...	w. & y.	...	5			
1 2	<i>Amaranthus bicolor</i>	hhA	va.	2	5	} The foliage of these is remarkably handsome, they are fine for beds and back-grounds.		
2	caudatus	hA	cr.	3	5			
2	— giganteus	6	10			
2	fulvus	...	bff.	3	5			
1 3	Melancholicus ruber	hhA	o. & r.	1	10	} <i>Joseph's Coat.</i>		
2	Spectosissimus	...	va.	2	10			
3	tricolor	5	<i>Browalia elata.</i>		
	<i>Amethyst</i>	see				Everlasting Flower; pretty.		
2	<i>Ammobium alatum</i>	†hhP	w.	2	10	} These flowers are very beautiful,—and, from their long duration in bloom, are valuable bedding-plants; each plant covers itself with bloom. Recommended in the highest terms by the Royal Horticultural Society of London.		
1 3	<i>Anagallis fruticosa</i>	†hhB	s.	1½	10

NEW FLOWERS FOR 1864.

ARTEMISIA ANNUA, beautiful hardy Annual, growing about four feet high. The color of the foliage and flowers closely resembles that of the Cypress.....	pk. 25	cts.
CALLIRHOE VERTICILLATA.—The flowers are of double the size of <i>C. pedata</i> , and very beautiful and hardy.....	“ 50	“
CINERARIA WEBBII, beautiful new variety from the Canary Islands, growing from three to four feet high, and covered with numerous flowers in crimson, violet, blue, white, &c.....	“ 25	“
CLARKIA PULCHERRIMA INTEGRIPETELA, an entire-petaled variety of <i>C. pulcherrima</i> , but much superior to it in color and form, and decidedly the most brilliant and showy of all the Clarkias; the size of the petals far exceeds that of any other variety; color, rich magenta rose; strongly recommended.....	“ 50	“
CONVOLVULUS AUREUS SUPERBUS.—This climber is distinguished by its handsome golden-yellow flowers.....	“ 25	“
CONVOLVULUS MAURITANICUS, hardy herbaceous creeper, with neat silvery foliage and lovely blue flowers; fine for hanging baskets.....	“ 25	“
CYCLANTHERA EXPLODENS, an ornamental Annual climber, with handsome foliage and pretty oval-shaped fruits, exploding loudly when ripe.....	“ 25	“
DELPHINIUM FORMOSUM CÆLESTINUM.—The finest blue; splendid novelty.....	“ 50	“
GODETIA RUBICUNDA SPLENDENS, hardy Annual; more brilliant in color than the old varieties; having, besides, purple blotches.....	“ 50	“
GODETIA ROSEA-ALBA TOM THUMB.—The original <i>Godetia rosealba</i> is well known as one of the prettiest of Annuals; its only demerit consisting in its being hardly sufficiently dwarf. This objection is overcome by the Tom Thumb variety: the color of the flower is pure white, with a brilliant rose blotch at the base of each petal; height one foot, and blooms in profusion.....	“ 50	“
HELIOTROPUM “CHIEFTAIN,” Mr. Cranstoun's new seedling; very large flower of a very dark violet color, and exceedingly fragrant.....	“ 50	“
HELIPTERUM SANFORDI, pretty dwarf tufted Everlasting, with small neat foliage and large globular clusters of bright golden-yellow flowers; fine for winter bouquets.....	“ 50	“
KAULFUSSIA ATROVIOLACEA.—This is a remarkably fine variety of the well-known <i>Kaulfussia amelloides</i> , and is the result of several years of careful and assiduous selection and cultivation; color, intense violet; the richest violet color of any Annual in cultivation; it is altogether a fine novelty.....	“ 50	“

LOBELIA PAXTONIANA.— <i>This is a seedling from the well-known Crystal Palace variety of Lobelia speciosa, quite as robust as its parent, with a much more compact habit. The individual flowers are much larger, with a pure white centre or eye; the outer margin or prevailing color (blue) resembling in tint the Nemophila insignis. It forms a very effective contrast and companion plant with its parent in the decoration of the summer garden.</i>	pk. 50 cts.
LOBELIA ERINUS GRANDIFLORA SUPERBA, <i>a beautiful new variety, of a dark-blue color.</i>	“ 25 “
LOBELIA ERINUS MARMORATA, <i>new marbled variety</i>	“ 25 “
LUPINUS DUNNETTII ATROVIOLACEA, <i>a fine, noble-looking Lupine, of a fine dark-violet color.</i>	“ 25 “
LUPINUS ALBO COCCINEUS.— <i>Of the many brilliant varieties of Lupine, this is by far the finest, and must undoubtedly be reckoned as an essential to every Annual Garden; the blossom spike is six inches in length; color, rich rosy red half way up the spike; from thence to the apex pure white; the general effect is very striking</i>	“ 50 “
MIMULUS TIGRIDIOIDES, <i>a new, very beautiful, and distinct strain, obtained by hybridizing the Mimulus cupreus with the best-named varieties of Mimulus. We have great pleasure in offering these collections of unique, blotched, and spotted varieties, selected from more than 200 seedlings, for their dwarf, compact habit, beauty, diversity of color and marking, and free-blooming qualities. The dwarf habit and freedom of growth of these desirable novelties render them great acquisitions for flower-garden bedding; and for Green-house and Conservatory decoration, they are invaluable, equaling the finest Herbaceous Calceolarias in the variety of their brilliant colors.</i>	“ 50 “
MIMULUS NOVA RUBRA, <i>a beautiful new variety, of a light-red color, with dark crimson centre</i>	“ 50 “
NEMOPHILA ATOMARIA OCULATA, <i>a splendid new variety, of blue and white color</i>	“ 25 “
PETUNIA “QUEEN BERTHA,” <i>a beautiful variety of this much admired fragrant flower; profuse bloomer; color, silver-gray, with dark striped throat</i>	“ 25 “
PRIMULA SINENSIS MACROPHYLLA, <i>remarkable new variety, with long, massive foliage and beautiful large flowers of great substance, beautiful form, finely fringed, of a rich purplish carmine, with pentagonal, large, yellow eye, surrounded by a brown zone. Very conspicuous and splendid acquisition.</i>	“ \$1.00
RHODANTHE ATROSANGUINEA, <i>new dwarf, densely branching species, with longer and more pointed leaves than Rh. maculata, with flowers of a dark purplish crimson. Very brilliant novelty.</i>	“ 25 cts.
RHODANTHE MACULATA ALBA, <i>a charming variety of the beautiful Maculata; it differs from it only in the color of the ray scales, which are of the purest and most silvery white, the disk being yellow as in R. maculata</i>	“ 25 “
SCABIOSA CANDIDISSIMA, <i>an entirely new variety of the sweet Scabious, and being pure white, is very desirable for a contrast with other kinds.</i>	“ 25 “

- VICIA GERARDI, a very useful and elegant annual climbing plant, resembling somewhat the *Eccremocarpus*, with bunches of lavender-purple Swainsonia-like flowers, which might be compared to those of *Wistaria sinensis*, but smaller. A beautiful plant for covering pillars, trellis-work, and walls to the height of eight to ten feet... 50 pks. 50 cts.
- VERBENA HYBRIDA STRIATA, new Italian striped, in most brilliant colors—rose, lilac, purple, crimson, &c..... “ 50 “
- VERBENA HYBRIDA CÆRULEA, new pure deep blue..... “ 50 “

NOVELTIES OF 1863,

ALL STRICTLY OUR OWN SELECTION.

IMPROVED FRENCH AND GERMAN ASTERS.

In this latitude, Asters should be sown from the middle of March to the first part of May, on a spent hotbed, or in pots, within a close pit or frame, or in the house,—and when an inch high they should be transplanted in fine soil, which should be spread over a discarded hotbed, from whence they can be bedded out when about three to four inches high. This should be done during, or immediately after, showery weather. *Asters do finely sown in the open ground, middle of May; the only objection to this mode is their late and short duration of flowering.*

 In ordering these Collections, please give the number of the particular assortments desired.

GERMAN TEN WEEKS STOCKS.

Sow at the same time, and treat precisely in the same manner as Asters,—except that they may be transplanted several times with advantage, in the earlier stages of growth—the shift tending to give them a more dwarf and compact habit.

 In ordering, please give the number of the particular assortment desired.

BEAUTIFUL FRENCH HYBRID GLADIOLUS.

The following will be found to be the most complete and choice Collection of this popular class ever offered to the public. Many of the varieties are quite new.

No description can give an idea of the brilliancy of color of the hybrid productions of the Gladiolus;—and from their free-flowering habit, and strong trusses of bloom, form the most desirable hardy flowering Bulbs of the Garden. The proper season for planting in this latitude is May, June and July. They thrive well in any good garden soil, and are admirably adapted for clumping and bedding.

	Doz.	Each.
1. Achille, bright red, with white lines.....		\$0 75
2. Adonis, light red and yellow, stained with carmine.....	\$3 00	30
3. Aglae, salmon rose, very large.....	2 50	25
4. Amabilis, bright vermilion, stained with yellow.....	4 00	40
5. Archimede, red, striped with carmine.....	2 50	25
